OBJECTIVE

B.E. Computer Science graduate with hands-on experience building real projects, from a full-stack bookstore app to a working prototype of a GraphRAG-style AI assistant. Comfortable with Java, Python, SQL, and JavaScript, and genuinely enjoy learning new tools by building with them. Looking for a Software Developer / Java Developer / Python Developer role where I can keep growing and contribute from day one.

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript, SQL

Web: HTML5, CSS3, JavaScript (DOM, Fetch API, async/await)

Databases: MySQL, SQLite, SQL

Tools: Git, GitHub, VS Code, Replit

Exploring (concept-level): Graph databases (Neo4j), LLM integration (OpenAI API), RAG architecture (LlamaIndex)

PROJECTS

Online Engineering Book Store

HTML · CSS · JavaScript · Open Library API

- Built a bookstore web app that pulls real, live book data from a public API — added search, cart, and checkout-style flow.
- Added a section specifically for engineering students to find textbooks and previous year question papers, filtered by department, regulation, and semester.

Knowledge Graph Assistant (GraphRAG Prototype)

JavaScript · Neo4j & LlamaIndex & OpenAI (architecture concepts)

- Built a working demo of GraphRAG — an AI pattern where a knowledge graph is used to ground an AI model's answers in real relationships instead of it just generating free-form text.
- Wrote the logic that traces graph paths (entity → relationship → entity) to answer questions, and shows the exact path it followed so the answer is explainable, not a black box.

Student Management System

Python · SQLite · CRUD

- Built a menu-driven app to add, search, update, and delete student records, with data saved to a local database so nothing is lost between runs.
- Deployed it online so it can be run and tested live, not just shown as code.

TaskFlow – Personal Task Manager

HTML · CSS · JavaScript · localStorage

- Built a task manager where tasks can be prioritized, filtered, and marked done, with everything saved in the browser so it's there next time you open it.

Network Analysis using Nmap

Nmap · Network Security

- Used Nmap to scan a network and find active devices, open ports, and running services.
- Went through the results to understand which services were exposed and why that matters for security.

CERTIFICATIONS

- Cyber Security Certification — EDU TANTR, Bangalore
- Web Development Certification — Don Bosco Tech

EDUCATION

B.E. Computer Science and Engineering (2022 – 2026) · DMI Engineering College

HSC — 68.5% (2022) · Govt Hr. Sec School, Eraniel

SSLC — 45.6% (2020) · Sacred Heart High School, Kadiapattanam

STRENGTHS

Problem Solving · Quick Learner · Teamwork · Communication Skills · Adaptability
